Mare owners are encouraged to use Stallions of the same or an adjacent Kinship Band as the Mare, producing progeny of lower Mean Kinship than both of the parent animals. Ideally matings should be chosen that produce progeny with lower MK than the average MK of the whole population (i.e. less than .22468 in 2009). Although this may not always be possible the Society encourages the breeding of pure bred foals with parents from the same or an adjacent Kinship Band, and the Kinship Coefficient of the foal is less than the Mean Kinship of the mare.

**At the request of breeders, information has been included for some stallions which are now deceased but for which frozen semen might still be available. Appearance on this listing is no guarantee of availability. Contact last owner for details.*

Please note that there is no longer a free registration scheme for SPARKS compliant foals. (Please refer to guidance notes for details).
